

ConX Wall for Situation Management & Response

Effective situation management and response requires accurate information and real-time access to key team members. Unfortunately, there's never been an easy, instantaneous way to view and interact with all of your most important personnel and video or information sources at once – until now.

ConX Wall facilitates the large scale visualization of people and ideas, making multiple streams of information clear and actionable. Integrating multi-party HD video conferencing with multi-platform data-sharing, ConX Wall enables mission critical decision-making. Monitor key video and data inputs—such as campus or stadium security, traffic cameras, or utility feeds—and when a situation arises, conduct face-to-face communication with team members offsite or in the field and share visuals from your video or data feeds in real-time.

Managing situations confidently and responding to incidents quickly and decisively is essential. ConX Wall enables a level of communication, collaboration, and accurate decision-making never before possible, so that you can share critical information easily, strengthen teams, and streamline time sensitive operations.

Key Features

- Display and interact with both videoconferencing participants & video data sources in full 1080p resolution
- Easily share camera feeds, security information, maps, and other important data on a fully configurable video wall that supports up to 96 HD panels and 216 inputs
- Conduct face-to-face communication between offices or from the situation room to mobile* users in the field with HD video conferencing** for up to 20 participants
- Present and share information from a full array of wired and mobile devices
- Easily control of the multi-panel presentation and layout via built-in, touch-based web app
- Customizable to almost any size or unique need: executive offices, huddle spaces, conference rooms, training rooms, or situational war rooms

*Mobile clients required cellular service.

**HD video conferencing requires a minimum of 2Mb up and download bandwidth.

Lower bandwidth will utilize sub-HD resolutions.

Ideal for:

- State and Local Government
- First Responders
- Field Operations
- Institutions of Higher Education
- Campus or Stadium Security
- Multi-Site Training Facility
- Manufacturing
- Municipal Situation Centers
- Major Utility Oversight
- Multi-Site Corporate Communication Rooms
